**RE: H20219 Interstate Distribution Center, Jasper County
Storm Water Letter**

HRC Engineers, Surveyors, and Landscape Architects (HRC) has performed a delineation of the on-site basins on the site of the proposed Interstate Distribution Center in Jasper County, SC. A delineation of both existing pre-developed basins and the proposed post-developed basins was performed to determine how storm water runoff to John Smith Road and McTeer Street will be affected by the construction of the proposed development.

The site was divided into three basins in both pre-developed and post-developed conditions. Pre A drains to John Smith Road and is not affected by the proposed development due to lying entirely within the City Limits, where no work is proposed to be performed. Pre B drains to McTeer Street and will be reduced in size in post-developed conditions due to the proposed storm drains in the proposed parking lot routing runoff into Post C. Pre C drains to Interstate 95 and will be increased in size in post-developed conditions due to the same proposed storm drains. Both Post A and Post B will remain wooded in post-developed conditions. Increased flows from Post C will be detained in the proposed storm water management system.

Based on this delineation of on-site basins, the proposed Interstate Distribution Center will result in unchanged amounts of runoff leaving the site to John Smith Road, and decreased amounts of runoff leaving the site to McTeer Street. The runoff towards Interstate 95 will be collected into the proposed storm water management system to control the release rates from the project site in that direction.

Should you have any questions or require additional information, please feel free to contact me at 770-942-0196.

Sincerely,

A handwritten signature in blue ink, appearing to read 'H. Ray', is written over a large, light blue circular scribble or stamp.

Howard B. Ray, PE
President
